

WHAT

DATA SCIENCE TRAINING

The demand for data science is increasing so quickly, it is predicted that by 2018 there will be a 50% gap in supply of data scientists versus demand.

Hence It is important for our company to train our employees with the latest skillsets.

WHY

One of the advantages of data science is that organizations can find when and where their products sell best. This can help deliver the right products at the right time—and can help companies develop new products to meet their customers' needs. Personalized customer experiences.

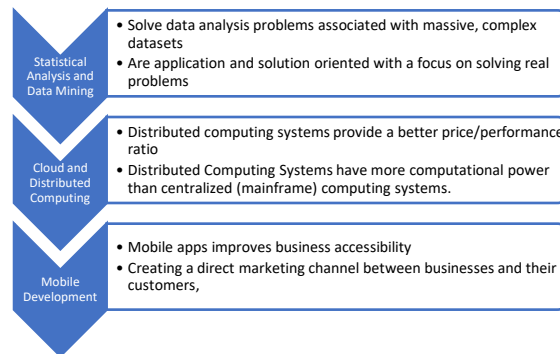

Top 3 most sought-after skills in US in 2016

Statistical Analysis and Data Mining

Cloud and Distributed Computing

Mobile Development

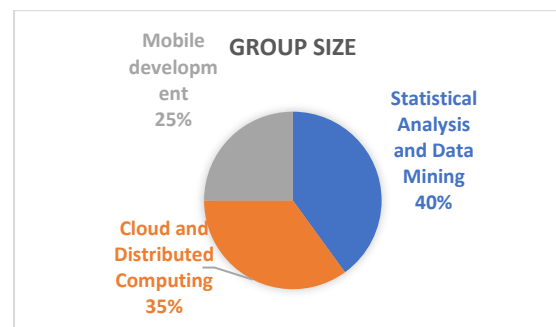

WHICH

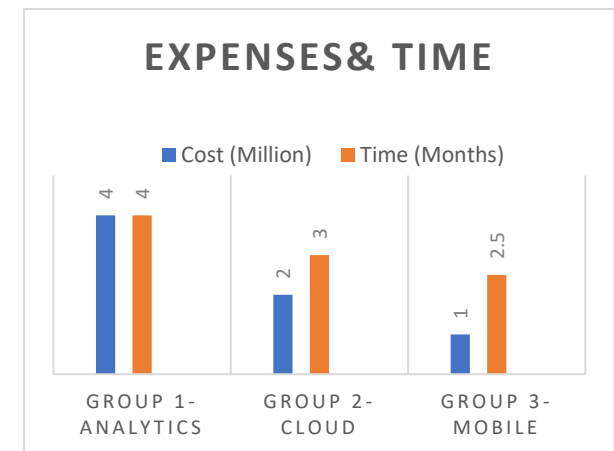

HOW

It is important to keep an edge on all Three technologies mentioned above.

Instead of choosing a single technology and training all the employees on that particular Technology, an Optimal approach would be dividing employees into three different groups and train each group on a particular technology.
